

C-ST-00 (Rev 1)

Re: Shelf Life and Storage Conditions

To Whom It May Concern:

The recommended storage conditions for all products sold by Mold-Rite Plastics is between 60-85°F (15-30°C) and 40-60% relative humidity. Product stored in conditions outside of these conditions may require additional testing.

Mold-Rite Plastics does not test for or define a “shelf life” for products produced. Shelf life is determined by a combination of factors: manufacture of sub-components, storage conditions (heat and humidity), and application/assembly processes, among others.

Mold-Rite Plastics warrants product sold for one (1) year in accordance to the Sales Terms and Conditions (www.mrpcap.com/customer-service/sales-terms-conditions/) unless Mold-Rite Plastics expressly agrees in writing to an exception. It is the customer’s responsibility to fully establish product performance based on the customer’s processes and product usability.
