

AUTOMOTIVE PACKAGING

Innovative, reliable and responsive solutions. Only from Mold-Rite.

The automotive aftermarket industry grew to \$14.6 billion in 2015, up almost 4% according to global information company The NPD Group, and the growth trend is expected to continue in 2016. New and used car sales, an increase in miles driven, and the increasing average age of vehicles on the road are factors influencing the aftermarket's strong performance. Choosing the right packaging can help your products stand out among the rest on automotive store shelves. Trust the packaging experts at Mold-Rite Plastics to help you create a package that will grow your business in this expanding market.

Automotive Packaging Trends

New product growth in performance enhancing fuel additives and fuel injection cleaners, are driving demand for required child-resistant closures.

Automotive products that are "new and improved" and "leading edge" need packaging with eye catching colors and graphics to convey the same message.

Additives, lubricants, fluids, and appearance products need to be easy to use and convenient to dispense, to appeal to the do-it-yourself consumers.

About Mold-Rite

A leading provider of packaging for more than 30 years, Mold-Rite Plastics has the jars and closures that deliver safety and compliance for the automotive industry. With a wide range of products to provide an optimal storage environment, choose Mold-Rite as your trusted partner for your packaging needs.
